Learn how Michigan Schools are using a wide variety of educational technologies installed and supported by

Sound Engineering

Providing educators with the tools they need to keep pace with the technological world around them!

Parents, teachers and school administrators know that school is no longer just about books, pencils and paper. Today's schools require the advanced technologies utilized in day-to-day life in order to interact with the community and produce successful students.

Smart System

All resources are available in **all** classrooms **all** the time. Teachers get instant access to a vast collection of resources via handheld remote, a standard mouse, a web browser, or even a telephone keypad. Its searchable database of all available media titles makes the Smart System a valuable lesson preparation tool, while its easy-to-use menu-driven interface quickly guides users through scheduling. The Smart System Unity offers a variety of media delivery, at any time, at any facility, at any location, to classroom TVs or monitors, or to individual desktops. It can easily be customized and adapted to grow with changing needs and system upgrades.

Live Broadcast Cart

The portable live broadcasting cart allows live broadcasts generated from a classroom, auditorium, cafeteria, or principal's office to be viewed throughout an entire school building, a selected group of rooms, an individual room or, if a video wide area network has been installed, an entire school district! By connecting the cart to a room's broadcast outlet, you can broadcast special events such as guest speakers, musical performances, science experiments and daily school announcements to one, a few, or all locations within the building.

Video Production Studios

Enhance your live broadcast capabilities with a custom designed video production studio. Create professional looking live broadcasts, edit pre-recorded video footage and enhance your audio abilities.

Paging and Communication

Establish immediate, direct communication between any remote station and your desk. Answer incoming calls. Select external program sources, like an AM/FM tuner or cassette tape player, and distribute them on an individual station, group, or all-call basis. Initiate group, all-call, or emergency all-call voice paging. You can even send a custodial call tone to all stations.

Sound Systems

Over 30 years of experience in designing and installing sound systems, let us help you with; Public Address Systems, School PA Systems, Professional Microphones, High-Definition Audio Components, Professional Sound Reinforcement, Audio Mixing Consoles, PA/Sound System Integration and Combining.
