Dynamic Houses of Worship

Being able to communicate with growing congregations is a challenge for even the most effective worship leader. The question is: How do **Houses of Worship** get people into the pews so they'll stay there, absorb the message, and ultimately return on a regular basis? Increasingly, worship leaders are investing in A/V technology, and equipment manufacturers are recognizing the special needs of this growing market. Because we live in a visual society, more video and audio solutions are being used in Houses of Worship and their related settings. According to recent research studies, the adoption of video and audio solutions by religious organizations is at an all-time high.

Sound Engineering has over 32 years of expertise in the design and installation of sound systems for virtually every type of setting. Along with helping you select the best equipment for your House of Worship, we offer Computer Enhanced Acoustic System Design to optimize the sound produced by your system according to the size and shape of the rooms and even the materials in your walls!

We at **Sound Engineering** look forward to working with you in your journey to enhance your congregation's worship experiences.

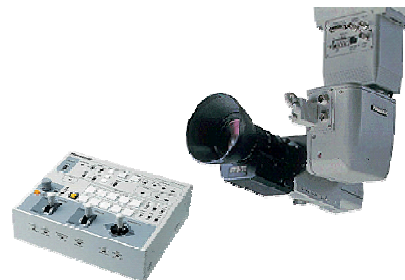

Production Video

Audio/Video Distribution

Video Distribution

Flat Panel Displays

Overflow Accommodations

Audio Distribution

Assistive Listening

For compliance with the American with Disabilities Act (ADA)

Products designed to provide easy to use and convenient wireless sound solutions for your hard of hearing congregational members, making sure they don't miss a moment of the worship experience.

Media Dubbing

Easy, Professional Replication

Why invest in media duplication?

According to *Church Production Magazine*, many churches now offer recordings of their services to their congregations. Indeed, members of the church find such recordings to be an excellent tool for keeping themselves in the scriptures while negotiating that long commute to work, catching up on what happened at church when away for the weekend, or even as an evangelistic outreach tool. When worship music is included as part of the recordings, the congregation can use the tapes or CD's as a way to participate in musical worship throughout the week!

MISSION STATEMENT

It is the mission of **Sound Engineering** to be the leader in the sound and video communication industry. Customer satisfaction, quality and diversity of services, system integration, service support and employee contentment defines leadership. Through professional expertise and experienced staff, in concert with high quality products, **Sound Engineering** strives to provide effectively engineered and fully integrated systems for business and institutional needs.
